SUMMARY

I am dedicated and skilled developer with a proven track record in web development and problem solving. Proficient in JavaScript (React), and Python (Django), with a solid foundation in Linux and Bash scripting. Beginner level experience in virtualization and containerization technologies, including Docker and kubernetes, with a keen understanding of REST APIs and a commitment to collaborative and efficient coding practices. Currently expanding expertise in DevOps methodologies and Cloud Computing to enhance overall development and system resilience and its security. Eager to contribute technical excellence and innovation to dynamic projects in a challenging professional environment.

DEVELOPMENT EXPERIENCE AND SKILLS

Linux

Command Line Navigation, File permissions, Text editing, Package Management, Process Management, Shell Scripting (beginner), User and Group Management, Virtualization.

Javascript (React.js)

Components (Class components, Functional components), Hooks, State Management (React Redux), Component LifeCycle, Props and PropTypes, Event Handling, List Rendering, Forms and their libraries(React hook form) , Routing, Responsive Designing (Material UI, Bootstrap), API Integration (axios), Integration and accessin data from backend through Rest APIs.

Python (Django) (Data Structures)

MVC (Model-View-Controller) architecture logic, Database Management, ORM (object-relational-mapping) for queries, RESTful APIs, Authentication and Authorization, Server Side business logic, Middlewares, Web services integration (third party packages), Security best practices with understanding of throttling and hashing, Documentation.

Containerization (docker)

Fundamental concepts, docker images (base image, custom build images), understanding of docker compose, Volumes for persistent data, docker registry (docker hub) etc.

Nginx

I can configure nginx for web server, reverse-proxy, concurrent connection with low resource consumptions, load balancer, http cache, security firewall for serving apps, routing.

Cloud Computing

AWS (I can launch private servers for enterprise applications very concisely)

GCP (I can serve and can deploy applications in the cloud in a very precisely manner)

- Networking
- Web Security
- MySQL
- PostgreSQL
- Visual Studio Code
- Github

- Agile Methodologies for Project Management
- Adaptable (Flexible in dynamic environments)
- Collaboration with other team members
- Balancing multiple tasks and responsibilities effectively
- With good time management

EDUCATION

Degree: BS Computer Science
University: University of Peshawar
Location: Peshawar, Pakistan
